

CT-Series Selection Guide

Step 1: Choose desired Shaft Weight & Flex

	A	A+	R-	R	R+	S-	S	S+	X-	X	X+
CT-100 88 - 98 g											
CT-115 103 - 112 g											
CT-125 121 - 125 g											

Step 2: Specify Raw Shaft Length(s) for Iron # / Flex from corresponding Build Chart

For example, the raw shaft length for a CT-115 S Flex 7 Iron is 38.5".
A CT-115 S Flex 4-PW set requires 40.0 - 37.0" shaft lengths.

Step 3: Butt Trim only to achieve desired length

The OBAN CT-Series is a Constant Weight, Taper Tip design. No tip trimming is required, Butt Trim only to finished length.

The CT-Series will play to Flex at standard and + / - length.

Step 4: Choose additional Wedges

Fitters select Flex options for wedges to optimize player performance. Commonly, the length used for the PW is also used for additional AW, GW, SW or LW shafts.

For example, wedges ordered for a CT-115 S Flex set are typically the 37.0" raw shaft length.
